

Symptoms

- Cough for more than three weeks
- Weight loss
- Fever
- Night sweats
- Hemoptysis

Do not perform TB skin test or QuantiFERON Gold on anyone with a prior positive. QuantiFERON Golds can be ordered Monday through Thursday only, and they cannot be done in villages.

What is a positive TB skin test?

- At least 10 mm of induration OR >5 mm of induration for patients who are high risk for TB. (See box.)
- Must be read 48-72 hours after placement to be a true negative.
- If positive, the induration can remain up to seven days and can be read until then.

High Risk for Tuberculosis

1. Immunosuppressed, HIV positive, prednisone >15 mg/day for >1 month, TNF-α blocker.
2. Suspicious chest X-ray.
3. Household contact with active TB.

LTBI Treatments: Choose one option. DOT is optional for all three treatment options.

1. 3HP: INH 15 mg/kg PO weekly, rounding to nearest 50 mg (max dose 900 mg) x 12 weeks AND Rifapentine PO weekly x12 weeks.
Rifapentine Dosing:
 - 32.1-49.9 kg: 750 mg
 - >50 kg: 900 mg (max dose)
2. Rifampin 10 mg/kg PO daily (max dose 600 mg) x4 months.
3. INH 5 mg/kg PO daily (max dose 300 mg) x9 months.
 - If on INH, give pyridoxine (vitamin B6) 50 mg PO daily to prevent neuropathy.
 - If patient is pregnant or HIV infected, the preferred treatment is INH for 9 months. In HIV infection, avoid rifampin and rifapentine.

Abbreviations

3HP: three month regimen of INH and rifapentine
 AFB: acid-fast bacilli
 DOT: directly-observed therapy
 INH: isoniazid
 LTBI: latent tuberculosis infection
 MTB-RIF: mycobacterium tuberculosis nucleic acid amplification test that also tests for rifampin resistance
 PHN: Public Health Nursing
 TNF-α: tumor necrosis factor alpha

Patient ≥14 years with:
 New positive TB skin test
 OR
 New positive QuantiFERON-Gold.

At least one symptom

No

Thirty minute appointment in Bethel for:
 • Physical exam
 • Chest X-ray
 • Labs: LFTs, HIV, and hCG if female

Abnormal chest X-ray?

No

LTBI

- Call PHN with plan of care.
- Begin treatment per box, using LTBI Power Plan.
- Send LTBI prescriptions to the YKHC pharmacy and securely email notification to LTBI_Case_Managers@ykhc.org.

Patient in village?

No

ACTIVE TB IS SUSPECTED

- Patient must wear surgical mask AND stay in a negative pressure room, if available, until MTB-RIF result is negative.
- Collect sputum samples using the "AMB NEW +PPD/LTBI" Power Plan. This generates orders for all three sputum samples, including the 2nd and 3rd day samples.
- First, if 18 or older, collect one sputum sample (3 mL in a urine cup) for MTB-RIF and send to lab.
- Next collect three sputum samples for AFB smear and TB culture (5 mL in a conical tube) at least eight hours apart.
- Obtain labwork: LFTs, HIV, and hCG if female.
- Chest X-ray if available.

If patient has symptoms concerning for TB, see [Active TB Guideline](#). Do not send patient to Bethel unless patient is medically unstable.

DO NOT PUT A PATIENT WHO MAY HAVE ACTIVE TB ON A PLANE UNLESS ACUTELY ILL; this could expose the other passengers. Perform evaluation in village, as able.

Consult TB officer regarding whether to treat for active TB
 • Consider treating for [CAP](#).

Sputum positive? No response to CAP tx?

No

LTBI.
 Continue full course of treatment per LTBI case managers.

Yes

MTB-RIF positive?

Yes

Active TB.
 Contact TB officer and see [Active TB Guideline](#).

How to Consult a TB Officer: Send a message via Tiger Connect to "TB Officers" Team.
